Subject: New Computers only with MS ?

Hello,

@first: sorry for my grammar (learned english by unix documentations and manuals ;-)

It's nearly 1 Jear ago i've shut down the most expensive Operating System forever.
Now I see a problem for every customer and firm who will get (a) computer/s without Microsoft Windoze. In germany it's forbidden to sell a computer wihtout a operating system. (in US too?) Most computer sellers can't support free operating-systems and free software (missing skills). And that's the reason why you must get MS-OS too even if you don't want it. So the laws that ever System must sell with a OS is realy bad for free systems and helps MS to be a monopolist and that's the reason why the hole world has windows and cracker attacks and virus problemes ...

So you have to build a law that everybody can get a operating system by his choice after selling a system without a operating system.

Also try to stop OEM Software boundles with new computers. They also makes MS to a monopolist.

I know, the US GOV will find a way for real justice.

sincerely,
